**Re: GE- Pittsfield/Housatonic River Site
On-Plant Consolidation Areas (GECD200)
Groundwater Monitoring Program**

Dear Mr. Olson:

In accordance with General Electric Company's (GE's) June 1999 *Detailed Work Plan for On-Plant Consolidation Areas*; August 1999 *Addendum to June 1999 Detailed Work Plan*; and June 13, 2000 *Response to April 27, 2000 EPA Comments*, enclosed is GE's *Semi-Annual Groundwater Monitoring Report; Hill 78 and Building 71 On-Plant Consolidation Areas (OPCAs)*. This report summarizes the groundwater-related activities that were performed during spring 2001 at the Hill 78 and Building 71 OPCAs in Pittsfield, Massachusetts.

Please feel free to contact me at (413) 494-3177 with any questions or comments.

Sincerely,

John F. Novotny, P.E.
Manager - Facilities & Brownfields Programs

1. Introduction

1.1 General

This Semi-Annual Groundwater Monitoring Report presents the results of groundwater monitoring activities performed during spring 2001 in the vicinity of the Hill 78 and Building 71 On-Plant Consolidation Areas (OPCAs) located within the General Electric Company's (GE's) Pittsfield, Massachusetts facility. The groundwater monitoring activities described in this report were performed in accordance with a series of documents submitted by GE to the U.S. Environmental Protection Agency (EPA), specifically: (1) *Detailed Work Plan for On-Plant Consolidation Areas* (Blasland, Bouck & Lee, Inc. [BBL], June 1999); (2) *Addendum to June 1999 Detailed Work Plan* (BBL, August 1999), which included GE's *Proposal for Future Groundwater Monitoring - Hill 78 and Building 71 Consolidation Areas*; and (3) *Response to April 27, 2000 EPA Comments* (GE, June 13, 2000).

The August 1999 Addendum presents the most detailed description of the groundwater monitoring program, although minor modifications were made in GE's June 13, 2000 response to EPA comments. On January 30, 2001, EPA issued a letter to GE regarding "Final Conditional Approval of General Electric's (GE) June 1999 Detailed Work Plan for the On-Site Consolidation Areas (OPCA), as amended by GE's August 12, 1999 Addendum, and modified by GE's June 13, 2000 Response to EPA's Comment Letter for the On-Plant Consolidation Areas (collectively the 'Work Plan'), GE-Pittsfield/Housatonic River Site." Although that letter contained conditions relating to other (i.e., non-groundwater-related) aspects of the operation of the OPCAs (which were addressed in subsequent correspondence from GE to EPA), it did not contain conditions relating to the groundwater monitoring and thus constituted EPA approval of the OPCA groundwater monitoring program as proposed.

1.2 Background

GE has performed several activities to select, design, and utilize two OPCAs, namely the Hill 78 Consolidation Area and the Building 71 Consolidation Area. The current locations of these areas are illustrated on Figure 1. These areas are being and will continue to be used for the permanent consolidation of materials (soil, sediment, demolition debris, etc.) removed during response actions and building demolition activities conducted at the GE

plant and several other areas around Pittsfield that are included within the GE-Pittsfield/Housatonic River Site (the Site).

The nature and scope of the required response actions at the Site, including provisions relating to use of OPCAs, were established in a Consent Decree (CD) executed in 1999 by GE, EPA, the Massachusetts Department of Environmental Protection (MDEP), and several other government agencies. The CD was entered by the United States District Court for the District of Massachusetts on October 27, 2000.

In connection with the design of the OPCAs, GE developed a groundwater monitoring program to be implemented during the operation of the OPCAs and subsequent to their closure. The primary objectives of this program are to: periodically assess groundwater conditions near the OPCAs; compare current conditions with those observed during previous monitoring activities; and identify potential changes in groundwater conditions that may be related to the consolidation activities. The groundwater monitoring program consists of a baseline groundwater investigation, groundwater monitoring during operation of the OPCAs, and groundwater monitoring during the post-closure period.

GE performed a baseline groundwater investigation at the OPCAs between June 14 and 17, 1999 to provide information on existing groundwater conditions prior to the onset of consolidation activities, and to serve as a basis for comparison for future groundwater monitoring results. The baseline groundwater investigation involved the sampling and analysis of 12 monitoring wells selected to provide spatial representation on all sides of the consolidation areas (i.e., upgradient, downgradient, and cross-gradient). The 12 monitoring wells included in the baseline groundwater investigation (78-1, 78-6, H78B-15, NY-4, and OPCA-MW-1 through OPCA-MW-8) are shown on Figure 1. The baseline groundwater investigation included the analysis of groundwater samples for polychlorinated biphenyls (PCBs) and non-PCB constituents listed in Appendix IX of 40 CFR Part 264 (excluding pesticides and herbicides), plus three additional constituents -- benzidine, 2-chloroethylvinyl ether, and 1,2-diphenyhydrazine (Appendix IX+3). (As discussed below, the analytical results from this baseline investigation are included in Table 3 of this report.)

Following the completion of the baseline groundwater investigation and EPA's January 30, 2001 conditional approval of the OPCAs groundwater monitoring program, GE initiated plans to implement a semi-annual groundwater monitoring program of groundwater level measurements, groundwater sampling, and laboratory analyses completed in the spring and fall of each year, followed by preparation of a summary report.

Based on the close proximity of the Pittsfield Generating Company to the OPCAs, GE is also assessing the condition of groundwater within the boundary of the generating plant to verify that the consolidation activities are not negatively impacting the plant supply wells. Pittsfield Generating Company personnel currently collect groundwater samples from ASW-5 (which serves as its primary source of cooling water) for PCB and volatile organic compound (VOC) analyses in accordance with an existing permitted program. GE has included the analytical results for samples collected from ASW-5 (as provided by the Pittsfield Generating Company) in this report, as well as an evaluation of the current data compared to past data. A summary of these data is contained in Appendix A.

Separate from the OPCA groundwater monitoring program, GE has proposed a groundwater and non-aqueous phase liquid (NAPL) monitoring program for the Plant Site 3 Groundwater Management Area (also known as GMA 4), which encompasses the OPCAs and adjacent areas. In its July 2001 *Baseline Monitoring Program Proposal for Plant Site 3 Groundwater Management Area*, GE proposed to incorporate the results of the OPCA groundwater monitoring program into future reports prepared for GMA 4 as a whole. Since EPA has not yet approved the proposal, the spring 2001 groundwater monitoring results for the OPCAs are presented herein. Following EPA approval and initiation of the GMA 4 baseline monitoring program, GE will no longer prepare these OPCA-specific reports, but will include all required groundwater-related information and evaluations pertaining to the OPCAs in the GMA 4 semi-annual reports.

1.3 Format of Document

This report is the first to be completed as part of the OPCAs groundwater monitoring program. Included in the report is a description of the scope of the groundwater monitoring activities, presentation and discussion of the associated groundwater monitoring results, comparisons of the recent groundwater monitoring results with the baseline data (and other monitoring activities, as appropriate), and an evaluation of the groundwater conditions based on the comparisons to prior results. Following this introductory section, Section 2 describes the procedures used to obtain field measurements and collect the groundwater samples, and briefly discusses the results of the spring 2001 field measurements. Section 3 summarizes the groundwater elevation measurements and presents the analytical results of the spring 2001 groundwater sampling. Section 4 presents a comparison of the recent monitoring results to the baseline groundwater data and prior investigation results, as well as a comparison of constituent concentrations with the applicable Method 1 groundwater standards set out in the Massachusetts Contingency Plan (MCP).

2. Field Procedures

2.1 General

The activities conducted as part of the semi-annual groundwater monitoring program during spring 2001 primarily involved the measurement of groundwater levels and the collection of groundwater samples from select monitoring wells adjacent to the OPCAs. Figure 2 presents a site plan identifying the groundwater monitoring locations, including the groundwater level measurement and sampling locations for the monitoring activities described in this report. Field sampling records are presented in Appendix B. This section discusses the field procedures used to measure site groundwater levels and collect groundwater samples.

2.2 Groundwater Level Measurement and Sample Collection

The spring 2001 groundwater monitoring activities were performed between April 30 and June 28, 2001. These activities included collecting depth-to-groundwater data from the wells listed in Table 1 and collecting groundwater samples from the wells listed in Table 2. Groundwater level measurements and groundwater samples were collected in accordance with the procedures specified in GE's approved *Field Sampling Plan/Quality Assurance Project Plan* (FSP/QAPP). Low-flow sampling techniques were utilized for the purging and collection of groundwater samples.

Groundwater level measurements were collected on April 30, 2001 from 11 of the 12 wells included in this monitoring program. Water levels could not be measured in OPCA-MW-5 as this well had been damaged since it was last monitored. To supplement the depth-to-groundwater data in the area of the damaged well, a measurement was collected from well H78B-28 on May 1, 2001. Well OPCA-MW-5 was replaced on May 11, 2001 with a replacement well designated as OPCA-MW-5R. The replacement well was developed on May 25, 2001, and water level data were collected from that well at the same time. The spring 2001 depth-to-water and groundwater elevation data for all these wells, together with well construction information for these monitoring wells, are presented in Table 1.

Groundwater samples were collected by BBL personnel between April 30 and May 3, 2001 from the 11 intact groundwater monitoring wells. Due to the damage described above, OPCA-MW-5 was excluded during this

initial sampling event, but groundwater samples were collected from replacement well OPCA-MW-5R on June 28, 2001. The monitoring wells were purged until stabilization of field parameters (including temperature, pH, specific conductivity, oxidation reduction potential, dissolved oxygen, and turbidity) utilizing low-flow sampling techniques or were pumped dry and allowed to recharge prior to sample collection. Field parameters were measured in combination with the sampling activities and these data are presented in Table 2. A general summary of the field measurement results during the spring 2001 monitoring event is shown below:

PARAMETER	UNITS	RANGE
Turbidity	nephelometric turbidity units	0.5 - 72.6
pH	pH units	5.73 - 7.20
Specific Conductivity	micromhos per centimeter	0.185 - 2.880
Oxidation-Reduction Potential	millivolts	-107 - 212
Dissolved Oxygen	milligrams per liter	0.92 - 12.40
Temperature	degrees Celsius	7.63 - 15.25

Well NY-4 was the only monitoring well which did not produce a sample with turbidity below 50 nephelometric turbidity units (NTU). Though the turbidity at well NY-4 did not drop below 50 NTU, the last three parameter readings at the well indicated that the turbidity along with the other parameters stabilized (as specified in Appendix E of the FSP/QAPP), therefore permitting the sample to be collected.

The collected groundwater samples were submitted to CT&E Environmental Services of Charleston, West Virginia for laboratory analysis of the following constituents using the listed EPA methods; filtered/unfiltered PCBs (8082), VOCs (8260B), semi-volatile organic compounds (SVOCs) (8270C), dioxins/furans (8290), filtered/unfiltered metals (6010B, 7000A, and 7470A), cyanide (9014), and sulfide (9034). The analytical results are presented in Table 3 (along with the baseline analytical results from June 1999).

3. Results

3.1 General

The results of the spring 2001 monitoring activities include depth-to-groundwater and groundwater elevation data, field parameter data, and groundwater analytical data. A description of the monitoring results is presented in the following sections.

3.2 Water Level and Field Parameter Measurements

Table 1 summarizes the groundwater level data (and associated groundwater elevations) collected during the spring 2001 groundwater monitoring event. This data was used to generate a groundwater elevation contour map for the OPCAs, which is presented on Figure 2. The results of the groundwater level measurements indicate that groundwater ranged from an approximate elevation of 1,017 feet above mean sea level north and northwest of the OPCAs to approximately 997 feet above mean sea level to the south. The groundwater elevation contours developed from the water level measurements indicate that the general flow direction is from north to south, although this pattern is interrupted by apparent groundwater mounding in the vicinity of the Former Hill 78 Landfill.

Screening for organic vapors at each of the monitoring wells was performed with a photoionization detector (PID) and is summarized in Table 2. The PID readings indicated overall a low presence of organic vapors at the monitoring wells with readings ranging from 0 to 9.2 PID units, although most measurements were less than 1 PID unit. Field parameter measurements collected at the monitoring wells during low-flow purging activities are also summarized in Table 2.

3.3 Groundwater Analytical Results

The spring 2001 groundwater samples were analyzed for the same constituents as the groundwater samples collected from the baseline investigation, i.e., PCBs and Appendix IX+3 constituents (excluding pesticides/herbicides). In addition, the spring 2001 groundwater samples included analysis of filtered samples for dissolved PCBs and Appendix IX inorganic constituents (inorganics), which were not included in the

baseline investigation. Table 3 provides a summary of the results of the groundwater sample analyses for the current monitoring round, as well as for the baseline event. Laboratory analytical reports for the OPCA groundwater samples are included in Appendix C. Groundwater sampling locations and the corresponding detected concentrations of PCBs and other Appendix IX+3 constituents are illustrated on Figure 3.

Total PCB concentrations in the unfiltered samples ranged from non-detect (at 10 locations) to 0.00031 ppm. Concentrations of total dissolved PCBs in the filtered samples ranged from non-detect (at 10 locations) to 0.00015 ppm. The only two locations where PCBs were detected were in the northwestern (well NY-4) and central (well OPCA-MW-4) portions of the OPCA area.

The results from the analyses for Appendix IX+3 constituents in the samples that were collected during the spring 2001 sampling event show the detection of one VOC, three SVOCs, seven inorganic constituents in unfiltered samples and six dissolved inorganic constituents, and a number polychlorinated dibenzo-p-dioxins (PCDDs)/polychlorinated dibenzofurans (PCDFs). For the PCDDs/PCDFs, total Toxicity Equivalency Quotients (TEQs) were calculated for each of the 12 wells, using the World Health Organization (WHO) Toxicity Equivalency Factors (TEFs), and are also included in Table 3.

3.4 Pittsfield Generating Company Water Supply Sample Results

The results of the most recent sampling activities at Pittsfield Generating Company well ASW-5 (conducted in June 2001) are summarized in Table A-1 of Appendix A, along with data from prior sampling events. The June 2001 results from well ASW-5 reveal that PCBs were not detected and only one VOC (trichloroethene at a concentration of 0.016 ppm) was observed in the groundwater sample.

4. Evaluation and Conclusions

4.1 General

This report constitutes the first semi-annual monitoring report submitted since commencement of the groundwater monitoring program associated with the OPCAs. Conclusions developed herein are based on the laboratory analytical results obtained from the spring 2001 groundwater level measurements and sampling activities, in combination with historical information generated during previous investigations.

4.2 Water Level Measurements

The groundwater elevation contours developed from the water level measurements indicate that the general flow direction is from north to south, although this pattern is interrupted by groundwater mounding in the vicinity of the Former Hill 78 Landfill. Because wells OPCA-MW-1 through OPCA-MW-8 were constructed specifically for this groundwater monitoring program, there are limited historical data (consisting only of the June 1999 baseline monitoring event) to serve as a basis for comparison to the spring 2001 groundwater elevations. The groundwater elevations in each of these eight wells increased from the June 1999 measurements, with an average increase of approximately 2 feet and the greatest increase being 2.92 feet at well OPCA-MW-2. In the other monitoring wells, the groundwater elevation fluctuations from the June 1999 to spring 2001 measurements showed a slight increase, with an average increase of 1.68 feet and the greatest increase being 2.37 feet at well 78-1. Groundwater elevations in these wells were generally within the range of previously recorded groundwater level fluctuations. Therefore, the apparent increase in groundwater elevations from the baseline monitoring event is attributed to the seasonal fluctuations when the measurements were collected (April 2001 versus June 1999), rather than a change due to initiation of OPCA operations.

4.3 Groundwater Analytical Results

The spring 2001 groundwater data are generally consistent with the data from the baseline sampling in June 1999 and data for the four previously existing wells. Analytical data from the June 1999 and spring 2001 groundwater sampling events are presented in Table 3, and prior data for wells 78-1, 78-6, H78B-15, and NY-4 are presented in Appendix D.

The analytical results from the spring 2001 sampling of the OPCA monitoring wells were also compared to MCP Method 1 groundwater standards. Under the CD, these Method 1 standards serve as the basis for the groundwater quality Performance Standards unless alternative standards are proposed by GE and approved by EPA. Specifically, the analytical data from four wells that are near occupied buildings -- wells H78B-15, OPCA-MW-1, OPCA-MW-4, and OPCA-MW-5R -- were compared to the Method 1 GW-2 standards, while the analytical data from all 12 of the OPCA monitoring wells were compared to the Method 1 GW-3 standards. However, since none of the OPCA monitoring wells constitutes a downgradient perimeter well for GMA 4, none of them is a compliance point for the GW-3 standards, and hence the CD Performance Standard for achieving the GW-3 standards at such perimeter compliance points does not apply to these wells. In addition, the analytical results from all 12 wells were compared to the MCP's Upper Concentration Limits (UCLs) for groundwater.

Further, in making these comparisons for PCBs and inorganics, GE considered whether to use the results from the filtered or the unfiltered samples. Under the MCP, the comparisons of site analytical data to the MCP Reportable Concentrations are to be based on the dissolved concentration results from filtered samples (310 CMR 40.0362(1)), and the comparisons to Method 1 standards are to be based on the type of sample results that are representative of the concentrations which the receptor would contact. GE believes that, for comparison to GW-3 standards (there are no GW-2 standards for these constituents), the dissolved concentration results from filtered samples are the more representative since they reflect the concentrations of the chemicals that could migrate through the ground to surface water. Accordingly, the comparisons to the Method 1 standards for PCBs and inorganics were based on the filtered sample results, although the unfiltered sample results were also considered in evaluating the potential impact of the OPCAs on groundwater quality in this area.

The results of these comparisons are shown in Table 3 and discussed in the following sections for VOCs, SVOCs, PCBs, PCDDs/PCDFs, and inorganics.

4.3.1 VOCs

Toluene was the only VOC detected during the spring 2001 sampling event. This constituent was observed only in well 78-1 at an estimated concentration of 0.0047 ppm, which is less than the method detection limit of 0.005 ppm and well below the Method 1 GW-3 groundwater standard (50 ppm).

4.3.2 SVOCs

Three SVOCs were detected in the sample from OPCA-MW-5R: acenaphthene (0.011 ppm), dibenzofuran (estimated concentration of 0.0038 ppm), and naphthalene (0.062 ppm). These constituents were not detected in well OPCA-MW-5 in the June 1999 baseline event (at a detection limit of 0.01 ppm). However, the detected concentrations of acenaphthene and naphthalene in spring 2001 are well below the applicable Method 1 standards (GW-3 standard of 5 ppm for acenaphthene, GW-2 and GW-3 standards of 6 ppm for naphthalene), and the detected concentration of dibenzofuran (for which there is no Method 1 standard) is an estimated concentration that is below the detection limit used in June 1999. Consistent with the June 1999 baseline groundwater sampling results, no SVOCs were detected in the remaining 11 monitoring wells.

4.3.3 PCBs

The results of the PCB analyses from the spring 2001 groundwater sampling event show that PCBs were detected in only two of the 12 monitoring wells included in the study (wells OPCA-MW-4 and NY-4). In those two wells, the filtered PCB sample concentrations were below the Method 1 GW-3 groundwater standard (0.0003 ppm). The unfiltered PCB samples from those wells showed concentrations of 0.000093 ppm (estimated) in well OPCA-MW-4 and 0.00031 ppm in well NY-4. Compared to the total PCB concentrations (unfiltered) observed in those wells during the 1999 baseline monitoring round (filtered samples were not collected during that round), the 2001 concentration in well OPCA-MW-4 represents a decrease from the 1999 concentration (0.00089 ppm), while the 2001 concentration in well NY-4 represents a slight increase from the 1999 concentration (0.00012 ppm). However, well NY-4 was also sampled in 1996, when the results showed an unfiltered total PCB concentration of 0.017 ppm and a filtered concentration of 0.0013 ppm. Thus, the overall data from this well show a decreasing trend in PCB concentrations, and the slight increase in unfiltered concentrations between 1999 and 2001 falls well within the normal fluctuations in PCB concentrations in this well attributable to conditions that existed before construction and usage of the OPCAs. Hence, that slight increase does not appear to be due to OPCA operations.

4.3.4 PCDDs/PCDFs

Although trace levels of PCDDs and PCDFs were observed at more wells in spring 2001 than in June 1999, the calculated total TEQs for each of the groundwater samples were less than detection and/or very low and less than the Method 1 GW-3 standard of 1.0E-7 ppm. Therefore, PCDDs/PCDFs in groundwater are not a concern at this time. GE will continue to monitor for these constituents to further assess their presence.

4.3.5 Inorganics

Several inorganic constituents were detected in the samples collected from the OPCA monitoring wells in spring 2001. Minor fluctuations relative to the 1999 results were observed in some of the inorganic concentrations at certain wells. However, there were no exceedances of the Method 1 GW-3 standards for these constituents.

4.4 Pittsfield Generating Company Analyses

GE reviewed the results of the Pittsfield Generating Company's June 2001 sampling event for well ASW-5. The data reports include analyses for VOCs and unfiltered PCB constituents. Trichloroethene was the only constituent detected at a concentration above detection limits, with a concentration of 0.016 ppm. This concentration does not exceed the Method 1 GW-3 standard of 20 ppm and is consistent with previous sampling events. A summary table and corresponding data reports for the June 2001 data, as well as prior analytical results, for well ASW-5 are included in Appendix A.

4.5 Summary

The spring 2001 groundwater sampling and analysis activities performed as part of the OPCA semi-annual groundwater monitoring program indicate that the consolidation activities at the OPCAs are not negatively impacting the groundwater in the vicinity of the OPCAs. The spring 2001 sample results show no significant impacts on groundwater quality compared to the pre-OPCA data. For PCBs, the spring 2001 sampling detected PCBs in only two of the 12 monitoring wells, and the filtered PCB sample results from those two wells were below the Method 1 GW-3 standard. The unfiltered PCB sample results from those wells showed a decrease from 1999 in one well and a slight increase from 1999 in the other well. However, the concentration detected in

the latter well (NY-4) falls well within the range of PCB concentrations previously detected at that well prior to the initiation of OPCA operations, and thus does not indicate an effect from the ongoing consolidation activities. For non-PCB constituents, the spring 2001 sampling results showed no exceedances of the UCLs, the Method 1 GW-2 standards (where applicable), or the Method 1 GW-3 standards.

5. Schedule of Future Activities

5.1 General

Schedule requirements related to the OPCA groundwater monitoring program were generally identified in the series of Work Plans submitted to EPA between June 1999 and June 2000, and further clarified in the GMA 4 Baseline Monitoring Proposal. The schedule for the OPCA groundwater monitoring activities will not change following EPA approval of the GMA 4 Baseline Monitoring Proposal, but the reporting requirements will be subject to modification. This section provides a schedule primarily for the fall 2001 OPCA groundwater monitoring round, as it appears that that monitoring round will occur prior to implementation of the GMA 4 baseline monitoring program.

5.2 Field Activities Schedule

During the fall 2001 monitoring event, GE will collect groundwater elevation data and analytical samples from the same 12 wells that have been utilized to date in the OPCA groundwater monitoring program. No changes in the analytical parameters are proposed at this time, although GE may propose to modify or reduce the analyses at certain wells in the future. In accordance with the approved semi-annual monitoring schedule, GE anticipates that the fall 2001 sampling event will take place in early November 2001. Prior to performance of these activities, GE will provide EPA with 7 days advance notice to allow the assignment of field oversight personnel.

Depending on the EPA approval status of the GMA 4 Baseline Monitoring Proposal, GE may also perform additional groundwater-related field activities in the vicinity of the OPCAs, as may be required under the GMA 4 baseline monitoring program. These activities may include well inspections and/or installation of additional soil borings and monitoring wells.

5.3 Reporting Schedule

Currently, there is no established schedule for submittal of the semi-annual OPCA groundwater monitoring reports. However, in the GMA 4 Baseline Monitoring Proposal, GE proposed to incorporate the results of the OPCA groundwater monitoring program into future reports prepared for GMA 4 as a whole. To be consistent

with that proposal, GE will submit a report on the fall 2001 OPCA groundwater monitoring event within the proposed timeframe for submittal of fall baseline groundwater monitoring interim reports for GMA 4 (i.e., by February 28, 2002). In addition, GE will continue to provide the results of the OPCA groundwater monitoring activities in its monthly reports on overall activities at the GE-Pittsfield/Housatonic River Site.

NOTES:

1. Depth-to-groundwater measurements collected by Blasland, Bouck & Lee, Inc. on April 30, 2001 except that, since well OPCA-MW-5 was found to be obstructed at 5.26 feet and thus could not be monitored, supplemental depth-to-groundwater measurements were collected from nearby well H78B-28 on May 1, 2001, and from replacement well OPCA-MW-5R on May 25, 2001.
2. Feet AMSL: Feet above Mean Sea Level.
3. Feet BGS: Feet Below Ground Surface.
4. Feet BMP: Feet Below Measuring Point.

NY-4	0.7	72.6	11.90	6.84	6.392	110.0	2.46

Notes:

1. Well parameters were monitored continuously during purging by low-flow techniques. Final parameter readings are presented.
2. The dissolved oxygen probe was not functional during the purging of well OPCA-MW-5R.

Notes:

- 1) Samples were collected by Blasland, Bouck & Lee, Inc., and were submitted to CT&E Environmental Services, Inc. for analysis of Appendix IX+3 constituents.
- 2) ND - Analyte was not detected. The number in parentheses is the associated quantitation limit for volatiles and semivolatiles and the associated detection limit for other constituents.
- 3) B - Analyte was also detected in the associated method blank.
- 4) J - Indicates an estimated value less than the practical quantitation limit (PQL).
- 5) J* - Indicates an estimated value between the instrument detection limit and practical quantitation limit
- 6) J** - Indicates an estimated value between the lower calibration limit and the target detection limit.
- 7) NS - Not Sampled - Parameter was not requested on sample chain of custody form.
- 8) w - Estimated maximum possible concentration.
- 9) Duplicate results are presented in brackets.
- 10) With the exception of dioxin/furans, only those constituents detected in at least one sample are
- 11) Total dioxins/furans determined as the sum of the total homolog concentrations; non-detect values considered as zero.
- 12) Total 2,3,7,8-TCDD toxicity equivalents (TEQs) were calculated using the World Health Organization (WHO) Toxicity Equivalency Factors (TEFs) for all PCDD/PCDF congeners (per the Statement of Work for Removal Actions Outside the River), although GE does not accept the validity of these TEFs.
- 13) * The Method 1 GW-3 standard and UCL listed for total TEQs are based on use of MDEP's TEFs, not the WHO TEFs.

- GROUNDWATER ELEVATION (IN FEET)
- GROUNDWATER FLOW DIRECTION

- NOTES:**
- MAPPING IS BASED ON AERIAL PHOTOGRAPHS AND PHOTGRAMMETRIC MAPPING BY LOCKWOOD MAPPING, INC. - FLOWN IN APRIL 1990; DATA PROVIDED BY GENERAL ELECTRIC COMPANY; AND BLASLAND AND BOUCK ENGINEERS, P.C. CONSTRUCTION PLANS.
 - SITE BOUNDARIES ARE APPROXIMATE.
 - NOT ALL PHYSICAL FEATURES SHOWN.
 - GROUNDWATER CONTOURS ARE BASED ON GROUNDWATER ELEVATION DATA COLLECTED BY BLASLAND, BOUCK & LEE, INC. ON APRIL 30 AND MAY 1, 2001.
 - THE LOCATIONS OF WELLS H78B-8 AND H78B-8R WERE SLIGHTLY MODIFIED IN ORDER TO MORE CLEARLY DELINEATE THE EXTENT OF MEASURABLE LNAPL AT THE SCALE OF THIS DRAWING.
 - INFERRRED GROUNDWATER ELEVATION CONTOURS BASED ON REVIEW OF AVERAGE GROUNDWATER ELEVATIONS AT PLANT SITE 3 GROUNDWATER MANAGEMENT AREA.

 Well Headspace (ppm) 0.7

Site Name O.P.C.A. Groundwater sample
 Sampling Personnel SLB
 Date 4/20/01 Time In / Out
 Weather Mostly sunny w/75F

WELL INFORMATION

	TIC	BGL
Reference Point Marked on Casing		
Height of Ref. Pt. Relative to Grade		
Well Diameter	<u>2"</u>	
Well Depth	<u>31.62</u>	
Screen Interval Depth		
Water Table Depth	<u>8.99</u>	
Intake Depth of Pump/Tubing		

Redevelop? Y N**WELL WATER INFORMATION**

Length of Water Column	<u>22.63</u>
Volume of Water in Well	<u>3.7 gallons</u>
Minutes of Pumping	<u>estimated 55 minutes</u>

EVACUATION INFORMATION

Volume of water removed from well

-4000Evacuation Method: Bailer () Pump ()Did well go dry? Y NPump Type: GILGEARWater Quality Meter Type(s) / Serial Numbers: Hanna HI-22 w/ Flow Through cell.

Time	Pump Rate (L/min.)	Total Gallons Removed	Water Level (TIC)	Depth to Water	Temp. (Celsius)	pH	Cond. (mS/cm)	Turbidity (NTU)	DO (mg/l)	ORP (mV)

TABLE D-1

GENERAL ELECTRIC COMPANY - PITTSFIELD, MASSACHUSETTS

ON-PLANT CONSOLIDATION AREAS

SUMMARY OF HISTORICAL GROUNDWATER DATA
(Results in ppm)

Notes:

1. Only parameters detected in at least one sample are shown.
2. -- Compound was not detected.
3. J - Indicates an estimated value less than the practical quantitation limit (PQL).
4. B - Analyte was also detected in the associated blank.
5. N - Indicates sample matrix spike analysis was outside control limits.
6. The calculation of totals includes B, J, and N qualified data, as applicable.
